¹ Data release 6.0 includes outcomes from follow-up phases that closed on or before 9/15/2016

² Excludes cancer diagnoses where cervical site of origin could not be ruled out, but neither is the favored site [n=2]

³ Unknown site generally includes cervical - not specified, with the following exceptions: baseline and incident include invasive diagnoses where cervical is one of favored primary site(s) but other reproductive site(s) cannot be ruled out [n=2]

⁴ Unknown timing represents cases that are unknown if diagnosis at or prior to baseline vs. post-baseline (i.e. incident case)

⁵ Race/ethnicity: precedence given to Hispanic ethnicity first, then Black race, then other race, then White race

⁶ Medical confirmation of reported cervical cancer is generally from pathology report but may include other medical documentation; National Death Index (NDI) Plus or death certificate confirmation is specific to cases that do not have medical confirmation

⁷ Stage at diagnosis is only available for cases with medical confirmation
